A Socio-psychological Case Study in Multiple Deviance

The authors in this volume make a case for LTSER's potential in providing insights, knowledge and experience necessary for a sustainability transition. This expertly edited selection of contributions from Europe and North America reviews the development of LTSER since its inception and assesses its current state, which has evolved to recognize the value of formulating solutions to the host of ecological threats we face. Through many case studies, this book gives the reader a greater sense of where we are and what still needs to be done to engage in and make meaning from long-term, place-based and cross-disciplinary engagements with socio-ecological systems.

Drought Impacts on Socio-economic Aspects

How does social media affect working life in Higher Education? How are universities harnessing its power to aid student learning? This innovative collection brings together academics and those working in professional services to examine these questions and more. The diverse and expert contributors analyse the many ways social media can be used to enhance teaching and learning, research, professional practice, leadership, networking and career development. The impact of social media is evaluated critically, with an eye both to the benefits and the problems of using these new forms of digital communication. This is the first volume to give such detailed attention to this area of high interest. Its innovative approach extends to its creation, with contributors found via their presence on Twitter. The short and impactful chapters are accessible while retaining an academic focus through their application of relevant learning theories and educational context. Social Media and Higher Education is essential reading for any professional working in higher education, including lecturers teaching education courses. It is also significant for researchers looking at more recent developments in the field and what it means to work in a modern higher education environment.

Case Studies in Social Psychology

Social Media in Higher Education: Case Studies, Reflections and Analysis

This title was first published in 2000. This work has its origins in the 1995 Congress of the International Federation for Housing and Planning, held in Belfast. The theme was “Accommodating Differences”. “Differences” were defined in broad terms, and included ethnic and social, economic and political differences. However, Frederick W. Boal’s own interest in ethnic differences motivated him to invite a number of Congress participants to make available their papers for inclusion in this book of essays. It seeks to offer experience that can be drawn on by housing practitioners who are operating in multi-ethnic contexts. It also provides empirical material that should contribute to the development of more soundly-based theoretical insights in both urban sociology and social geography.

Social Network Analysis

Characteristics of Committed Delinquents

This brief presents the case study of a hill in Czech Republic (Říp) and its region, and contributes to theorization in sociocultural psychology on three points, along three current debates. First, it contributes to the exploration of the mutual constitution of the lifecourse and of history, uses a distinction between socio-, micro- and ontogenesis, and argues that a focus on a delimited geographical space enables to better observe the processes by which history, daily situated interactions and courses of life shape each other. Second, in doing so, it sketches an understanding of the role of the material, spatial and semiotic specificities of landscapes in human development. Especially, it identifies some of the processes by which redundant dynamic patterns present in the environment may participate to the guidance of human experience. Third, it expands the reflection on case study construction and generalization. On the one side, it participates to a current debate in cultural psychology on the dynamics of generalization from single cases; on the other, it also dialogues with a more general reflection in the social sciences on social dynamics at the scale of small regions. Altogether, this brief is a first attempt to examine jointly these questions at the scale of a small region, a unique natural laboratory of social and psychological change. It will be of interest to researchers as well as graduate students in the fields of cultural and sociocultural psychology, cognitive psychology, and the social sciences.

Ethnicity Housing: Accommodating the Differences

Religious studies and research have gained a lot of interest and attention from researchers, policy makers, and practitioners over the last few years, but the socio-economic impacts have not been explored. Taking into account the profound economic impact the tourism and hospitality industries can have on regions and cities around the world, further research in this area is critical to analyze the extent of such impact and the ramifications that are associated with it. The Handbook of Research on Socio-Economic Impacts of Religious Tourism and Pilgrimage is a pivotal reference source that provides vital research on the social and economic factors in faith-based journeys. While highlighting topics such as tourist spending, spiritual tourism, and local development, this publication explores religious tourism in the middle age, as well as the methods of modern religious tourism. This book is ideally designed for business managers, cultural preservationists, academicians, business professionals, entrepreneurs, and upper-level students seeking current research on religious tourism and its socio-economic impacts.

Good Times and Bad Times in Rural Java

Sociocultural Psychology on the Regional Scale

Socio-Linguistic Considerationin Teaching English : A Case Study

The main purpose of this book is not only to present recent studies and advances in the field of social science research, but also to stimulate discussion on related practical issues concerning statistics, mathematics, and economics. Accordingly, a broad range of tools and techniques that can be used to solve problems on these topics are presented in detail in this book, which offers an ideal reference work for all researchers interested in effective quantitative and qualitative tools. The content is divided into three major sections. The first, which is titled “Social work”, collects papers on problems related to the social sciences, e.g. social cohesion, health, and digital technologies. Papers in the second part, “Education and teaching issues,” address qualitative aspects, education, learning, violence, diversity, disability, and ageing, while the book’s final part, “Recent trends in qualitative and quantitative models for socio-economic systems and social work”, features contributions on both qualitative and quantitative issues. The book is based on a scientific collaboration, in the social sciences, mathematics, statistics, and economics, among experts from the “Pablo de Olavide” University of Seville (Spain), the “University of Defence” of Brno (Czech Republic), the “G. D’Annunzio” University of Chieti-Pescara (Italy) and “Alexandru Ioan Cuza University” of Iași (Romania). The contributions, which have been selected using a peer-review process, examine a wide variety of topics related to the social sciences in general, while also highlighting new and intriguing empirical research conducted in various countries. Given its scope, the book will appeal, in equal measure, to sociologists, mathematicians, statisticians and philosophers, and more generally to scholars and specialists in related fields.

Handbook of Research on Socio-Economic Impacts of Religious Tourism and Pilgrimage

Socio-economic Bases of Party Competition: a Case Study of North Carolina

Accommodating Low Socio-economic Status in the Classroom

The causes of the Asian economic crisis have been the subject of fierce debates among economists, yet little is known about the impact on employment and wellbeing. In Indonesia, the worst affected country, the malaise turned into a political and societal upheaval which brought an end to the New Order regime. Based on anthropological fieldwork in two villages along the coast of West java, the monograph discusses the repercussions for work and welfare in the rural hinterland. The authors criticize the policies of the government of Indonesia as well as those of other transnational agencies on what has happened and what should be done. Their micro-study on socio-economic dynamics in two localities, researched in a longitudinal perspective, argues that since the start of the crisis the poverty level, then already much higher than officially conceded, rose to include more than half of all households. In contrast to the received wisdom that the village still functions as a community, the crisis has widened the gap between the rural rich and poor. The fieldwork findings are held to justify conclusions for areas with similar structural characteristics: densely populated, with a highly skewed pattern of land distribution, long-distance labour circulation between city and countryside and involving a substantial part of the total workforce, especially the landpoor and the landless.

A Case Study in the Relationship Between Social Complexity and the Organization
of Ceramic Production from the Lake Pátzcuaro Basin, Michoacán, Mexico

In Case Studies in Social Psychology: Critical Thinking and Application, Thomas Heinzen and Wind Goodfriend use brief, entertaining case stories to illustrate the historical context and evolution of major theories within the field of social psychology. By employing a unique mix of contemporary research and hallmark studies, Heinzen and Goodfriend encourage students to explore new, meaningful ways of thinking about and connecting with foundational course concepts. In turn, this approach facilitates engaged conversation and deeper critical thinking both in and out of the classroom.

This book provides a comprehensive overview of socio-economic impact assessments for genetically modified organisms, including genetically modified crops. It features case studies involving Bt cotton and other selected crops with improved traits from six major institutions in India and combines field data with surveys on stakeholder perceptions. It also discusses global trends in the socio-economic assessment of GMOs and reviews the available literature on the economic assessment of GM crops and how various countries have implemented Article 26.1 of the Cartagena Protocol on Biosafety. Further, it explores cost-benefit analyses and sociological aspects of socio-economic assessments. Based on this, the book proposes a framework and offers guidelines for socio-economic assessment that can be adapted for various GM crops. Lastly, it examines the relevance of socio-economic impact assessment in light of new applications such as GM mosquitoes and gene drives. Given its scope, the book is of interest to all academics, policymakers, regulators, and general readers concerned about the broader impacts of GM crops and applications like gene drives.

Socio-cultural Case Studies for Population Education in Morocco, Peru, Rwanda, and the United Republic of Tanzania

Man’s intensifying use of the Earth’s habitat has led to an urgent need for scientifically advanced ‘geo-prediction systems’ that accurately locate subsurface resources and forecast the timing and magnitude of earthquakes, volcanic eruptions and land subsidence. As advances in the earth sciences lead to process-oriented ways of modeling the complex processes in the solid Earth, the papers in this volume provide a survey of some recent developments at the leading edge of this highly technical discipline. The chapters cover current research in predicting the future behavior of geologic systems as well as the mapping of geologic patterns that exist now in the subsurface as frozen evidence of the past. Both techniques are highly relevant to humanity’s need for resources such as water, and will also help us control environmental degradation. The book also discusses advances made in seismological methods to obtain information on the 3D structure of the mantle and the lithosphere, and in the quantitative understanding of lithospheric scale processes. It covers recent breakthroughs in 3D seismic imaging that have...
enhanced the spatial resolution of these structural processes, and the move towards 4D imaging that measures these processes over time. The new frontier in modern Earth sciences described in this book has major implications for oceanographic and atmospheric sciences and our understanding of climate variability. It brings readers right up to date with the research in this vital field.

**A Case Study of Doi Inthanon National Park Area**

**The Influence of Socio-cultural Factors on Economic Growth**

The book addresses the issue of interdisciplinary understanding of collaboration on the topic of social network studies. Researchers and practitioners from various disciplines including sociology, computer science, socio-psychology, public health, complex systems, and management science have worked largely independently, each with quite different principles, terminologies, theories, and methodologies. The book aims to fill the gap among these disciplines with a number of the latest interdisciplinary collaboration studies.
