Entertainment & Sports Law Journal Sports Publicity Lucy Tatman identifies the events and ideas that influenced the formation of a North American feminist paradigm. She explores the components of this paradigm, particularly the way in which they affect the understanding of knowledge. She then examines the representation of these elements in the theology of three prominent feminist theologians in North America: Rosemary Radford Ruether, Carter Heyward, and Sallie McFague. From her discussion of these scholars, she proposes that a responsible feminist practice of epistemology requires participatory discernment.

Knowledge Matters The Game Matters Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and other diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changelessness have all resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a healthy priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles and recommendations on these tasks. These include: recognizing the benefits of instilling lifelong physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

In this context clarity about the public mission of universities is vital, yet it is lacking both outside and inside academia. When universities educate students, is this simply a private benefit because it advances their careers? Or is it a public good because informed citizens are integral to democracy and essential for national economic development? How important is equal opportunity? What are the effects of hierarchy? Who pays now and who will pay tomorrow? Should the results of academic research be private property for sale or openly available for public use? Who sets the university research agendas? What kinds of scholarship flourish and what kinds suffer? Should producing competitive research take priority over educating competent students? Do international rankings distort these and other university priorities or provide needed objective assessments? What are the university's roles and responsibilities in terms of knowledge creation and dissemination today? And tomorrow? In this collection, scholars report from Asia, Africa, Europe, Latin America, and North America. They confront the realities and challenges of higher education as it is torn between multiple public and private agendas. This comparative perspective illuminates both the foundational mission of the university and the pressing need to clarify it. Villanova sports & entertainment law forum People are now exposed to more information than ever before, provided both by technology and by increasing access to every level of education. These societal gains, however, have also helped fuel a surge in narcissistic and misguided intellectual egalitarianism that has crippled informed debates on any number of issues. Today, everyone knows everything: with only a quick trip through WebMD or Wikipedia, average citizens believe themselves to be on an equal intellectual footing with doctors and diplomats. All voices, even the most ridiculous, demand to be taken with equal seriousness, and any claim to the contrary is dismissed as undemocratic elitism. As Tom Nichols shows in The Death of Expertise, this rejection of experts has occurred for many reasons, including the openness of the internet, the emergence of a customer satisfaction model in higher education, and the transformation of the news industry into a 24-hour entertainment machine. Paradoxically, the increasingly democratic dissemination of information, rather than producing an educated public, has instead created an army of ill-informed and angry citizens who denounce intellectual achievement. Nichols has deeper concerns than the current rejection of expertise and learning, noting that when ordinary citizens believe that no one knows more than anyone else, democratic institutions themselves are in danger of falling either to populism or to technocracy-or in the worst case, a combination of both. The Death of Expertise is not only an exploration of a dangerous phenomenon but also a warning about the stability and survival of modern democracy in the Information Age.
