**Adjuvant Therapy for Breast Cancer** Monica Castiglione, Martine J. Piccart, 2009-07-11 Adjuvant treatment is administered prior to or as follow up to surgical procedures for breast cancer Proven success in using medical therapies allowing for breast conserving procedures or reducing risk of occurrence Although there has been much progress towards a cure including the introduction of new targeted therapies metastasizing cancer remains highly incurable

**Estrogens and Antiestrogens II** Michael Oettel, Ekkehard Schillinger, 2012-12-06 For many years Springer has been publishing an impressive series of textbooks of pharmacology which have set standards in medical science Surprisingly an extensive overview of the current state of the art in research on estrogens and anti estrogens was still lacking The present two volumes on estrogens and anti estrogens provide a comprehensive review of a field of research in which remarkable progress has been made over the past few years New insights into the mechanisms of steroid hormone action resulted in a tremendous number of publications from which new principles of preventive and therapeutic applications of estrogens and anti estrogens emerged Although various electronic data bases provide easy access to this copious information there was a clear necessity for a monograph style textbook which assesses and summarizes current knowledge in this rapidly expanding field of research It should be noted however that due to this dynamic development it is barely possible to comprehensively update every aspect of basic and clinical knowledge on estrogens and antiestrogens Thus the intention of the editors was to provide the reader with an overview of the classic and most recently explored areas of research and stimulate future interests in basic and applied endocrinology Estrogens were among the first steroid hormones described in the scientific literature Since they were first isolated since the chemical synthesis and pharmacological characterization of naturally occurring estrogens and later on of orally active derivatives estrogen research has produced continuously hallmark results in reproductive endocrinology worldwide

**Adjuvant Therapy of Breast Cancer** I. Craig Henderson, 2012-11-05 The results of randomized trials evaluating the use of early or adjuvant systemic treatment for patients with resectable breast cancer provide an eloquent rebuttal to those who would argue that we have made no progress in the treatment of cancer Many of the tumors that we have been most successful in curing with chemotherapy and other newer forms of treatment are relatively uncommon In contrast breast cancer continues to be the single most common malignancy among women in the western world is increasingly a cause of death throughout Asia and Third World countries and remains one of the most substantial causes of cancer mortality world wide The use of mammography as a means of early detection has been shown to reduce breast cancer mortality by 25-35% among those populations in which it is utilized The use of adjuvant systemic treatment in appropriate patients provides a similar and additional reduction in breast cancer mortality Few subjects have been so systematically studied in the history of medicine and it seems fair to conclude that the value to adjuvant systemic therapy in prolonging the lives of women with breast cancer is more firmly supported by empirical evidence than even the more conventional or primary treatments using various combinations of surgery and radiotherapy
