The Implementation of the Oswestry Disability Index in an Outpatient Pain Relief Institute Vern Commet, 2011 Background

Low back pain is prevalent worldwide and is a disabling factor of almost epidemic proportions. One in four United States adults has experienced at least one daylong episode of low back pain. Low back pain is also one of the most common presenting complaints in the primary care outpatient clinic. Literature has shown that 15-40% of low back pain may be attributed to a facet-mediated cause. In 2008, the Department of Health and Human Services Office of the Inspector General released findings showing that the request for treatment of chronic low back pain from facet injections alone submitted to Medicare reached a staggering 307 million in 2006. An estimated 63% of those treated did not meet qualifications as defined by Medicare for the treatments, resulting in 96 million in improper payments to providers. Foreground: The new Local Coverage Determination LCD requires documentation of the use of a specific pain and disability measuring tool. The purpose of the capstone project was to implement the patient-rated Oswestry Low Back Pain Disability Index (ODI) at a local pain relief institute. The ODI describes adult patients' level of perceived disability regarding their facet-generated back pain. The use of the ODI can assist the providers of the institute in complying with the Medicare LCD. Medicare reimbursement denials reached 400,000 in 2009 at the institute secondary to the changes instituted by the Medicare LCD. The long-term objective of the project was to help maximize Medicare reimbursements. The medical director and his group were concerned about the delay, if not total lack of care, due to a fear of not being reimbursed by Medicare. Objectives: The goal of the capstone project was to change provider practice in order to comply with the Medicare guidelines and to use the ODI to guide the plan of care for patients with facet-generated back pain. The two-fold change was first to provide educational training for the providers and staff in the use and purpose of the ODI in meeting compliance of a patient disability measuring tool in relation to Medicare proposed requirements. And second was to identify ways that staff could ensure the use of the ODI at initial intake appointments and during post-treatment. Methods: The project director PD performed a two-month post-initiation retrospective chart review and a four-month retrospective chart review to evaluate providers' scoring and documentation of the use of the tool in the patients' charts at intake and during post-treatment follow-up visits. The PD reported on the findings of provider and staff compliance with the use of ODI to providers and staff at regular intervals two and four months after initiation. Outcomes: At the two-month review of charts, 99% of new patients were given the ODI to fill out in their intake data. By four months, compliance reached 100%. For every treatment group outlined in the project, incremental improvements were achieved by the four-month review. Unintended consequences experienced included that many patients did not return for their one-month follow-up appointment if they had shown significant improvement at the two-week follow-up. This skewed the data on the one-month follow-up appointments both at the two and four-month reviews.

Rehabilitation Outcome Measures Emma K Stokes, 2010-12-14 Rehabilitation Outcome Measures is a comprehensive review and comparison of measurement instruments in rehabilitation. It includes a high level section on professional practice in physiotherapy and an introduction to the World Health Organisation's WHO International Classification of Health. For those who wish to learn more about the relevance of reported measurement properties, the text focuses on how this knowledge can assist clinical decision making. Additionally, the book reviews a range of measurements in neurological rehabilitation as well as mobility, fatigue, physical activity, and patient satisfaction. Rehabilitation Outcome Measures is directed at students preparing for clinical practice as well as researchers and practitioners seeking information about a range of measurement instruments. Provides details on how to manage a project and select an outcome measure. Introduction to WHO's International Classification of Functioning, Disability, and Health. Boxes with specific links to clinical decision making. Easy format for review of measurement possibilities in each domain. Clear review of 36 measurement instruments.

Lumbar Spine Disorders Richard M. Aspden, Richard William Porter, 1996 This is a companion to Volume 1 with the same title and a similar approach, namely to draw together current understanding of the multifactorial nature of back pain. Both volumes together contain chapters contributed by most of the leading researchers into back pain in the UK and as such they constitute an unparalleled resource. Rather than concentrating on specialist areas such as surgery or the lumbar spine, the emphasis is on understanding the function and failure of the spine and its component tissues. As such, it contains material which is applicable to anyone with an interest in any aspect of the spine, from biomechanics to blood flow, epidemiology to economics, nerves to nutrition, and everything else in between.

Clinical Reasoning for Manual Therapists E-Book Mark A Jones, Darren A Rivett, 2003-11-04 A practical text covering the theory and the practice of clinical reasoning skills for all physical therapists. Provides readers with activities to improve their own clinical reasoning within their own clinical setting. With a range of very high caliber international contributors in the field of physiotherapy practice, this book gives the answers to the practitioner's question of how does one apply the theoretical knowledge involved in clinical reasoning to practice and how can one become a better practitioner as a result. This book will provide readers with activities to improve their own clinical reasoning within their own clinical setting. Increase clinicians' awareness of the clinical reasoning process. Encourage clinicians' reflection of their own reasoning, including factors that influence their reasoning, typical errors they may be making, and how to promote skilled reasoning.

Surgery for Low Back Pain Marek Szpalski, Robert Gunzburg, Björn L. Rydevik, Jean-Charles Le Huec, Michael Mayer, 2014-12-13 Low back pain is a very common problem that is increasingly being treated surgically. This book aims to evaluate carefully the possible surgical approaches to low back pain with detailed appraisal of the factors leading to their success or failure. It begins by explaining the scientific basis for surgery and considering the different diagnostic techniques that may be employed, thereby elucidating the surgical rationale, indications, and contraindications. The value of conservative options is also assessed to help the reader weigh the need for surgery. The various surgical modalities, including the most recent, are then fully described and evaluated with the aid of numerous illustrations. The book concludes with a chapter devoted to evidence-based analysis of the outcome of surgery in patients with low back pain. This book will be invaluable to orthopaedic and neurosurgeons, rheumatologists, neurologists, and all who are concerned with the effective treatment of this often debilitating condition.
