El tiburón que se volvió vegetariano DAVID FRANCISCO CAMARGO. HERNÁNDEZ, 2021 Un tiburón salió en busca de su alimento que consistía en peces crustáceos moluscos y tortugas etc Cazaba sigilosamente y lo primero que hacía era detectar a sus presas a grandes distancias gracias a las vibraciones que producían en el agua siendo detectadas por el gran escualo Era capaz de olfatear una gota de sangre a muchos kilómetros Sus preferencias variaban dependiendo de la zona donde estuviera su alimento Ciertamente salió muy hambriento pero no pudo alimentarse porque había muchos cazadores de tiburones Se dio cuenta que los perseguidores sabían de sus gustos por lo que ir en busca de comida se constituía en una trampa mortal Con el paso de los días y en vista de tal situación decidí cambiar de men convirtiéndome vegetariano Al comienzo fue bastante complicado pero tenía sus ventajas porque el pescado que últimamente había consumido ya no sabía a igual contenía plástico Desafortunadamente los mares habían sido contaminados por residuos sólidos que los peces tragaban generando una falsa plenitud hasta morir de hambre ya que los plásticos acumulados en el aparato digestivo creaban una sensación de saciedad que hacía que el animal dejara de comer Causaban obstrucción de las vías respiratorias heridas y perforaciones del sistema digestivo e incluso dañaban los órganos externos Por tal razón fue que el tiburón decidí consumir plancton y toda clase de algas que se encontraban en los mares Cada vez se hacía más difícil la pitanza ya que por todas partes se encontraban desechos tóxicos arrojados por los humanos Era consciente el peligro que corrían las futuras generaciones de peces marinos por lo que se ingenió una estrategia para evitar que continuaran deteriorando su hábitat Pasó de ser presa a cazador y a cuanto humano veía en acciones de pesca lo atacaba Entren a un grupo de escualos para derribar embarcaciones colocando trampas enredar las naves y romper sus cascos haciéndolas naufragar con la ayuda de los peces martillo y espada Así comienza este cuento que no es cuento y por eso lo cuento

The Ecology of River Systems Bryan R. Davies, Keith F. Walker, 2013-03-09 Our understanding of the ecology of running waters has come a long way during the past few years From being a largely descriptive subject with a few under tones concerned with such things as fisheries pollution or control of blackflies it has evolved into a discipline with hypotheses such as the River Continuum Concept Vannote et al 1980 and even a book suggesting that it offers opportunity for the testing of ecological theory Barnes Minshall 1983 However perusal of the literature reveals that although some of the very early studies were concerned with large rivers references in Hynes 1970 the great mass of the work that has been done on running water has been on streams and small rivers and information on larger rivers is either on such limited topics as fisheries or plankton scattered among the journals or not available to the general limnologist The only exceptions are a few books in this series of publications such as those on the Nile Rzeska 1976 the Volga Morduckai Boltovskoi 1979 and the Amazon Sioli 1984 and the recent compendium by Whitton 1984 on European rivers among which there are a few that rate as large
