**The Woolly Monkey** Thomas R. Defler,Pablo R. Stevenson,2014-05-27 Woolly monkeys are large attractive and widespread primates found throughout many parts of the Amazon basin It is only in the last twenty five years or so that long term studies of woollies in their forest habitat have been successful they have not generally been successfully kept in captivity But now especially because of their size these creatures are pressed on all sides by bush meat hunters and forest fragmentation Their future is becoming critically precarious and the editors feel that it is time to showcase these animals with a full book The editors draw together a number of recent woolly monkey studies from three Amazonian countries including five taxa of woolly monkeys four of which have recently been reclassified without using new biological criteria as species rather than subspecies Groves 2001 2005 Rylands Mittermeier 2009 This volume provides a diversity of studies by well known researchers and advanced students on a wide range of subjects using newly generated data including a criticism of the recent taxonomic changes The varied information contained within The Woolly Monkey Behavior Ecology Systematics and Captive Research will help readers understand these handsome animals and will we hope energize them to contribute to their conservation

**Habitat Preference in the Yellow-tailed Woolly Monkey (lagothrix Flavicauda) at Yambrasbamba, Peru** Sandra Lucia Almeyda Zambrano,2016 We assessed how habitat use and preference in the endemic and Critically Endangered yellow tailed woolly monkey Lagothrix flavicauda are linked to forest structure and composition The study took place in the community of Yambrasbamba in Northeastern Peru Very little is known about the spatial distribution and habitat preference of L flavicauda Our objective is to identify and highlight the characteristics of habitats most utilized by L flavicauda in order to contribute to its conservation by providing information that will be useful for the selection of priority sites for habitat protection and to improve habitat quality The study site was classified into three different use zones high medium and low use according to the number of presence records collected from May 2013 to February 2014 for one group of L flavicauda Forest structure and composition were assessed for all use classes using the Gentry vegetation transects methodology Results show great variation in species composition across the three use zones Food plants have predominately greater density dominance and ecological importance in high use zones Use zones presented similar forest structure a reverse J shape diameter distribution None of the structural variables analyzed seem to be related to preference in L flavicauda

**The Anatomy of the Human Peritoneum and Abdominal Cavity Considered from the Standpoint of Development and Comparative Anatomy** George. S. Huntington,2020-09-28 In considering the anatomy of the human abdominal cavity and peritoneum in the following pages the explanation of the adult conditions encountered is based upon the development of the parts and the successive human embryonal stages are illustrated by the examination of the lower vertebrates presenting permanent adult structural conditions which appear as merely temporary embryonal stages in the development of the higher mammalian alimentary tract For the sake of clearness and brevity all discussion of the theories of peritoneal development has been designedly omitted The assumption of peritoneal adhesion and consequent obliteration of serous areas offers many advantages in considering the adult human abdominal cavity especially from the standpoint of comparative anatomy The same has consequently been adopted without reference to divergent views and theories In studying the descriptive text and the diagrams the student should remember that the volume offers in no sense a complete or detailed account of the development of the abdominal cavity and its contents The purpose is not to present the embryology of this portion of the vertebrate body but to utilize certain embryological facts in order to explain the complicated adult conditions encountered To avoid confusion and to bring the salient points into strong relief the majority of the diagrams illustrating human embryonal stages are purely schematic Moreover in order to avoid confusing and unnecessary details it is often desirable to disregard developmental chronology entirely Many of the diagrams combine several successive developmental stages showing different degrees of development in different portions of the same drawing Again it is frequently necessary for the sake of brevity and clearness to actually depart from known embryological conditions If for example the stomach and liver are treated as if they were from their inception abdominal organs the student of systematic embryology will recall the fact that this position is only obtained after their primitive differentiation by growth and migration

**New World Monkeys** Alfred L. Rosenberger, 2020-09 This book is a broad synthesis of new world monkey evolution integrating their unique evolutionary story into the bigger picture of primate evolution and Amazon biodiversity Capsule For more than 30 million years New World monkeys have inhabited the forests of South and Central America Whether these primates originally came from Africa by rafting across the Atlantic or crossing overland from North America they soon flourished This book tells the story of these New World monkeys Integrating data from fossil and living animals it explores the evolution of the three major New World monkey lineages as well as how they fit into the broader story of primate evolution and Amazon biodiversity After providing readers with necessary background in primate taxonomy and systematics Rosenberger shows that the notion of adaptive zones is central to our understanding of primate evolution The idea of adaptive zones can explain how radiations evolve morphological adaptations appear and communities form From here Rosenberger synthesizes what is known about New World monkeys unique ecological adaptations including those involving feeding and locomotion as well as their social behaviour The book s concluding chapters explore theories of how primates first arrived in South America and what their future looks like given the threat of extinction Biography Internal Use Only Alfred L Rosenberger is Professor Emeritus of Biological Anthropology at Brooklyn College An expert on the origin and evolution of New World Monkeys Rosenberger has contributed numerous articles in edited volumes and his work is published in journals such as Nature Journal of Human Evolution and American Journal of Primatology Audience The audience for this book is scholars and graduate students in biological physical anthropolog and primatology and to a lesser extent conservation biology evolutionary biology and behavioral ecology Rationale no copy text Other Relevant Info no copy text

Scent Marking in a Wild Population of Woolly Monkeys (*Lagothrix lagotricha poeppigii*) in the Ecuadorian Amazon Ginna Natalia Camargo Peña, 2020 Scent marking is a type of communication that consists in leaving chemical signals that persist in the environment and can be perceived via olfaction by conspecifics. Among primates there is scant information from wild studies about the function of scent marking, partly given the assumption that olfaction has been partially replaced by visual senses in this order, especially among Anthropoids. We investigated the patterns and the possible function of scent marking in a wild population of lowland woolly monkeys *Lagothrix lagotricha poeppigii* at the Tiputini Biodiversity Station in the Ecuadorian Amazon. Woolly monkeys display two types of scent marking behaviors: pectoral and anogenital rubbing. We used behavioral and spatial data to test whether marking behaviors were related to territorial and/or sexual behaviors. We found that adult males perform scent marking significantly more than any other age-sex category and they display pectoral rubbing at a significantly higher frequency than anogenital rubbing.
