English Word Formation Johannes Klaas, 2001-11-22 Seminar paper from the year 1998 in the subject English Language and Literature Studies Linguistics grade 2.3 B University of Cologne English Seminar language English abstract I Aronoff Selkirk and Lieber on the structure of the English lexicon and the nature and use of word formation rules In the wake of Chomsky's Remarks on Nominalization 1970 in which Chomsky makes a strict distinction between syntax and derivational morphology Aronoff 1976 proposes a word-based theory of the lexicon This lexicon is a separate component of the grammar in which derivational word formation processes are dealt with This hypothesis is called strong lexicalist hypothesis Aronoff suggests that inflection and compounding are not taking place in the lexicon but in the syntax Spencer 1991: 82 As to the nature of the listed lexical items Aronoff does not go along with Halle who in 1973 assumed that the lexicon is made up of three lists: a list of morphemes, a list of actual words, and a list of words that are regularly formed but are non-existent McCarthy 1992: 25 In his theory Aronoff reduces the three lists to one single list, stating that it could only be words that are listed in the lexicon, not morphemes A reason for this assumption is that morphemes other than words are not persistent in meaning and sometimes they do not seem to have any meaning at all A good example for meaningless morphemes are the so-called cranberry morphemes

Word Formation in Parallel Architecture Pius ten Hacken, 2019-06-10 This book aims to reconcile the generative considerations of Jackendoff's Parallel Architecture (PA) with the European structuralist approach to naming It shows that there are good reasons to single out word formation as a separate component in PA It demonstrates that it is a drawback not to distinguish word formation and explains that the function of word formation rules is different from the function of the lexicon and rules of grammar After making the argument for a separate word formation component, the book sets out to determine which types of rule qualify as part of this component Traditionally the boundaries of word formation with inflection and with syntax have been a matter of debate By focusing on the naming function, the book poses a guiding principle for determining which rules should be in the word formation component The position of morphology in the architecture of grammar has always been an issue of debate in generative linguistics Since Chomsky 1970, this question has been framed in terms of the Lexicalist Hypothesis Compared to Chomsky's architectures, Jackendoff's Parallel Architecture places phonetic and conceptual structures at the same level as syntactic structure, i.e. connected by bidirectional linking rules rather than interpretation rules One of the consequences is that PA does not formally distinguish lexicon entries from rules of grammar This changes the setting for the question of the autonomy of morphology because the Lexicalist Hypothesis depends on this distinction
