Fluorescence In Situ Hybridisation

Fluorescence In Situ Hybridization (FISH) - Application Guide Thomas Liehr, 2008-11-26 This book is a unique source of information on the present state of the exciting field of molecular cytogenetics and how it can be applied in research and diagnostics. The basic techniques of fluorescence in situ hybridization and primed in situ hybridization (PRINS) are outlined, the multiple approaches and probe sets that are now available for these techniques are described, and applications of them are presented in 36 chapters by authors from ten different countries around the world. The book not only provides the reader with basic and background knowledge on the topic but also gives detailed protocols that show how molecular cytogenetics is currently performed by specialists in this field. The FISH Application Guide initially provides an overview of the historical development of molecular cytogenetics, its basic procedures, the equipment required, and probe generation. The book then describes tips and tricks for making different tissues available for molecular cytogenetic studies. These are followed by chapters on various multicolor FISH probe sets, their availability, and their potential for use in combination with other approaches. The possible applications that are shown encompass the characterization of marker chromosomes, cryptic cytogenetic aberrations, and epigenetic changes in humans by interphase and metaphase cytogenetics, studies of nuclear architecture, as well as the application of molecular cytogenetics to zoology, botany, and microbiology.

FISH Technology Bernd W. Rautenstrauf, 2002-02-14 Fluorescence in situ hybridization (FISH) has been developed as a powerful technology which allows direct visualisation or localisation of genomic alterations. The technique has been adopted to a range of applications in both medicine, especially in the areas of diagnostic cytogenetics and biology. Topics described in this manual include FISH on native human tissues such as blood, bone marrow, epithelial cells, hair root cells, amniotic fluid cells, human sperm cells; FISH on archival human tissues such as formalin fixed and paraffin embedded tissue sections; cryofixed tissue; simultaneous detection of apoptosis and expression of apoptosis related genes; comparative genomic hybridization; and special FISH techniques.

Fluorescence in situ Hybridization (FISH) Joanna M. Bridger, Keith Morris, 2016-08-23 Fluorescence in situ Hybridization (FISH) belongs to that special category of well established molecular biology techniques that since their inception a few decades ago have succeeded in keeping a prominent position within the constantly expanding list of laboratory procedures for biomedical research and clinical diagnostics. The design simplicity and cost effectiveness of the early FISH protocols, combined with the significant acceleration of discoveries in related technical areas such as fluorescence microscopy, digital imaging, and nucleic acid technology, have prompted the diversification of the original technique into an outstanding number of imaginative and useful applications, and thus have not only held back its outmoding but have also promoted its expansion into different areas of basic and applied research in the post-genomic era. The 34 chapters included in this book aim at portraying the vibrant complexity and diversity of the current FISH protocol landscape, providing cutting edge examples of various applications for genetic and developmental research, cancer research, reproductive medicine, diagnostic and prognostic purposes, microbial ecology, and evolutionary studies. The book is divided into four parts: I Core Techniques, II Technical Advancements and Novel Adaptations, III Translational FISH Applications for Human Genetics and Medicine, and IV Protocols for Model Organisms.

Molecular Cytogenetics Yao-Shan Fan, 2008-02-05 The new techniques of molecular cytogenetics mainly fluorescence in situ hybridization FISH of DNA probes to metaphase chromosomes or interphase nuclei have been developed in the past two decades Many FISH techniques have been implemented for diagnostic services whereas some others are mainly used for investigational purposes Several hundreds of FISH probes and hybridization kits are now commercially available and the list is growing rapidly FISH has been widely used as a powerful diagnostic tool in many areas of medicine including pediatrics medical genetics maternal fetal medicine reproductive medicine pathology hematology and oncology Frequently a physician may be puzzled by the variety of FISH techniques and wonder what test to order It is not uncommon that a sample is referred to a laboratory for FISH without indicating a specific test On the other hand a cytogeneticist or a technologist in a laboratory needs from case to case to determine which procedure to perform and which probe to use for an informative result To obtain the best results one must use the right DNA probes and have reliable protocols and measures of quality assurance in place Also one must have sufficient knowledge in both traditional and molecular cytogenetics as well as the particular areas of medicine for which the test is used in order to appropriately interpret the FISH results and to correlate them with clinical diagnosis treatment and prognosis

The Functional Nucleus David P. Bazett-Jones,Graham Dellaire,2016-10-17 This book gives an in depth overview on nuclear structure and function It clearly shows that the epigenome and the three dimensional organization of the nucleus are not independent properties The intimate relationship between the location and the epigenetic modifications of gene loci is highlighted Finally it shows that the complex three dimensional organization of the nucleus is not just of academic interest The structure composition and function of virtually all of the sub nuclear compartments identified so far can be implicated to a list of human genetic diseases Hence a detailed elucidation of how these domains are assembled and function will provide new opportunities for therapeutic intervention in clinical practice
