

SCIENTIST-PRACTITIONER MODEL

The scientist-practitioner model is focused on providing extensive training to students in research and scientific methods. It is juxtaposed to the practitioner-scholar model.

EXAMPLES

1. Original Research Focus

- Students will be expected to conduct their own original research based on scientific methods.

2. Doing a PhD instead of an EdD

- While the EdD is geared towards individuals looking to put their knowledge into practice, the PhD is primarily focused on conducting research.

PROS AND CONS

Pros

- Promotes critical thinking skills
- Ensures practice is supported by empirical research

Cons

- Students usually attend university out of an interest in becoming practitioners, not researchers.
- Students may graduate without sufficient practical skills.

The Clinical Psychologist as Science-practitioner Clive Garry Long, 1995 The scientist practitioner model in clinical psychology is critically examined and illustrated by reference to applied research using archival data as well as survey single case and group design methodology A definition of the scientist practitioner as one who consumes and utilises research findings and who may also undertake research is espoused and defended It is argued that the scientist practitioner model is an appropriate one for clinical training since in providing practitioners with a scientific mentality it allows for psychology's unique contribution The realisation of the scientist practitioner ideal however is dependent on psychologists embracing a wide range of alternative research methods on post graduate employment settings that support and internalise the model and on a recognition by researchers that they have a responsibility for disseminating their findings through effective communication channels

The Scientific Practice of Professional Psychology Steven J. Trierweiler, George Stricker, 2013-11-21 A workable vision of scientific practice has proven to be an elusive if laudable goal for professional psychology The field cannot be faulted for failing to seek scientific wisdom but it has been slow to integrate that wisdom fully with the wisdom of practice This has proven to be a major oversight for despite psychology's long if the standing commitment to science practitioners are unlikely to think scientifically methods and products of science are described in ways that make it impossible to do so Unfortunately the rhetoric of science too often has done just that So focused has it been on the problem of distinguishing good science from bad that it has inadvertently defeated any hope of a practical science developing in our field We offer one remedy for this situation This book is about scientific thinking for the professional psychologist Specifically it is a primer on the application of scientific logic to professional practice We argue that the professional needs a more straightforward and realistic scientific identity than heretofore has been available The professional consciously must become a local clinical scientist bringing all the power of scientific thought to the specifics of the clinical situation Contrary to forces in psychology that promote uncritical acceptance of science as given by academic researchers or alternatively that encourage criticism and ultimate disregard of the scientific endeavor we call for a redoubling of efforts to incorporate scientific thought into practical professional inquiry

Realism and Psychological Science David JF Maree, 2020-07-23 The book provides an argument why realism is a viable metatheoretical framework for psychological science By looking at some variations of realism such as scientific realism critical realism situational realism and Ferraris new realism a realist view of science is outlined that can feature as a metatheory for psychological science Realism is a necessary correction for the mythical image of science responsible for and maintained by a number of dichotomies and polarities in psychology Thus the quantitative qualitative dichotomy scientist practitioner polarity and positivist constructionist opposition feed off and maintains a mythic image of science on levels of practice methods and metatheory Realism makes a clear distinction between ontology and epistemic access to reality the latter which easily fits with softer versions of constructionism and the former which grounds science in resistance and possibility loosely translated as criticism By taking science as a critical activity an issue such as the quantitative imperative loses its defining force as a hallmark of science it provides epistemic access to certain parts of reality In addition essentially critical activities characteristic of various qualitative approaches may be welcomed as proper science Academics professionals and researchers in psychology would find value in situating their scholarly work in a realist metatheory avoiding the pitfalls of traditional methodologies and theories
