Stop Bang Questionnaire

STOP, THAT and One Hundred Other Sleep Scales Azmeh Shahid, Kate Wilkinson, Shai Marcu, Colin M Shapiro, 2012-01-06 There are at least four reasons why a sleep clinician should be familiar with rating scales that evaluate different facets of sleep. First, the use of scales facilitates a quick and accurate assessment of a complex clinical problem. In three or four minutes, the time to review ten standard scales, a clinician can come to a broad understanding of the patient in question. For example, a selection of scales might indicate that an individual is sleepy but not fatigued, lacking alertness with no insomnia, presenting with no symptoms of narcolepsy or restless legs but showing clear features of apnea, exhibiting depression, and a history of significant alcohol problems. This information can be used to direct the consultation to those issues perceived as most relevant and can even provide a springboard for explaining the benefits of certain treatment approaches or the potential corollaries of allowing the status quo to continue. Second, rating scales can provide a clinician with an enhanced vocabulary or language, improving his or her understanding of each patient. In the case of the sleep specialist, a scale can help him to distinguish fatigue from sleepiness in a patient or elucidate the differences between sleepiness and alertness, which is not merely the inverse of the former. Sleep scales are developed by researchers and clinicians who have spent years in their field, carefully honing their preferred methods for assessing certain brain states or characteristic features of a condition. Thus, scales provide clinicians with a repertoire of questions, allowing them to draw upon the extensive experience of their colleagues when attempting to tease apart nuanced problems. Third, some scales are helpful for tracking a patient's progress. A particular patient may not remember how alert he felt on a series of different stimulant medications. Scale assessments administered periodically over the course of treatment provide an objective record of the intervention, allowing the clinician to examine and possibly reassess her approach to the patient. Finally, for individuals conducting a double-blind crossover trial or a straightforward clinical practice audit, those who are interested in research will find that their own clinics become a source of great discovery. Scales provide standardized measures that allow colleagues across cities and countries to coordinate their practices. They enable the replication of previous studies and facilitate the organization and dissemination of new research in a way that is accessible and rapid. As the emphasis placed on evidence-based care grows, a clinician's ability to assess his or her own practice and its relation to the wider medical community becomes invaluable. Scales make this kind of standardization possible, just as they enable the research efforts that help to formulate those standards. The majority of Rating Scales in Sleep and Sleep Disorders 100 Scales for Clinical Practice is devoted to briefly discussing individual scales. When possible, an example of the scale is provided so that readers may gain a sense of the instrument's content. Groundbreaking and the first of its kind to conceptualize and organize the essential scales used in sleep medicine, Rating Scales in Sleep and Sleep Disorders 100 Scales for Clinical Practice is an invaluable resource for all clinicians and researchers interested in sleep disorders.

Impact of the STOP-Bang Questionnaire on the Assessment of Sleep Apnea in Hospitalized Adults with Acute Decompensated Heart Failure (ADHF) Rebeca Kane,2018 Background Over half the patients diagnosed heart failure have co existing sleep apnea New guidelines in the treatment of heart failure recommend early recognition and assessment of sleep apnea Evidence shows that adequate treatment of sleep apnea decreases morbidity and mortality in high risk patients with heart failure Using a valid and reliable assessment tool like the STOP Bang c Sleep Apnea Questionnaire can help identify patients in need of further assessment Current practice at the bedside does not use a systematic approach to screen patients with heart failure for sleep apnea Methods An evidence based project was piloted consisting of educational sessions on the use of the STOP Bang c Sleep Apnea Questionnaire followed by the implementation of the tool on two cardiac telemetry units A retrospective chart review was conducted to determine the impact of the questionnaire on referrals to the sleep center when compared to current standard practice Evaluation The DNP student compared the number of referrals to the sleep center pre and post implementation of the STOP Bang c Sleep Apnea Questionnaire over a three week pilot Conclusion Early assessment of sleep apnea with a validated questionnaire allows for an increase number of referrals for polysomnograms leading to early identification and differentiation of sleep disorders Based on risk health care providers can formulate appropriate referrals for better outcomes Further research to evaluate outcomes such as mortality and readmissions based on sleep apnea treatment is needed Keywords sleep apnea heart failure STOP Bang c questionnaire obstructive sleep apnea central sleep apnea

Practice Assessment for Adoption of the STOP-Bang Screening Tool Scott Patrick Rosenfield,2017 Patients undergoing surgery with unrecognized obstructive sleep apnea OSA are at greater risk of complications Ninety percent of those affected in the United States remain undiagnosed To improve identification screening tools such as the STOP Bang questionnaire Chung et al 2008 provide anesthesia providers a method of detecting undiagnosed OSA The purpose of this study is to assess anesthesia providers practice of preoperative screening for OSA An email survey was conducted at a Level III trauma center in Phoenix Arizona The survey consisted of a 13 question 5 point Likert scale questionnaire It was sent to 29 Certified Registered Nurse Anesthetists CRNA A total of 8 CRNA s responded Respondents were either neutral or disagreed that current methods of OSA screening works well and generally agree that the STOP Bang tool would provide an advantage over the current methods accurately detect OSA and inform their anesthetic plan over current methods Respondents leaned towards strong agreement that improving the recognition of undiagnosed OSA is needed However they were generally neutral on agreement that the STOP Bang is necessary at their facility Respondents agreed that the STOP Bang tool is easy to use and interpret However most agreed that integrating the tool would add complexity to the preanesthesia evaluation but they remained neutral on whether it would add significant time to this process Respondents were neutral on their observations that the STOP Bang tool would improve early detection of OSA or reduce perianesthesia complications Just 25% of respondents reported being aware of the existence of the STOP Bang tool and none reported having used it In conclusion this project demonstrates that some providers have not used the STOP Bang screening tool to detect undiagnosed OSA but agree this tool is preferred over their current method Results from the survey brought insight to a potential quality improvement strategy related to improving the perianesthesia care of patients with undiagnosed OSA Improving knowledge through dissemination of evidence illustrates the value of the STOP Bang prior to piloting the tool The rates of perioperative complications justify the implementation of perioperative strategies such as the STOP Bang as a tool for anesthesia providers

Revised Protocol for Application of the Stop Bang Screening Tool and Utilization of Stop Bang Scores at and Ambulatory Surgery Center Tamera Lee Hansen,2023 Obstructive sleep apnea OSA occurs when the airway of a patient becomes anatomically obstructed or collapsed and is often accompanied by periods of paused breathing called apnea leading to cardiac difficulties that affect the heartbeat heart rate and the development of thrombus It is reported that up to 60% of preoperative patients have undiagnosed OSA More than one billion people in the world suffer from OSA and in the United States more than 80% of patients who have OSA are undiagnosed and untreated In Utah over 33% of adults report shortened sleep cycle which is a symptom of OSA and in Washington county in southern UTah over 32% of adults report this same problem When surgical patients present to an ambulatory surgical center for elective surgery they should be screened for OSA quickly and easily because many of them have not been properly screened prior to this and if OSA is present then those patients are at risk for serious complications The purpose of this project is to raise educational awareness and competency within the staff at the surgery center surrounding the use of the STOP Bang questionnaire SBQ for proper risk assessment for OSA and to revise the OSA assessment process with the use of the complete SBQ and then utilize those SBQ scores to improve patient awareness and education on their risk for OSA

Increasing the Rates of Referrals for Sleep Studies by Implementing the Stop-bang Questionnaire Into Primary Care Practice Anna Perlik,2022 Obstructive sleep apnea OSA is a growing pandemic in the United States affecting about 9% of middle aged women and 24% of middle aged men Meng et al 2016 Currently OSA screening is not considered a part of the regular patient evaluation in primary care settings The disease contributes to a variety of detrimental comorbidities and increased mortality rates if left untreated The purpose of this 11 week evidence based project was to implement routine screening for OSA in primary care facility using Stop Bang Questionnaire SBQ in individuals over the age of 18 to increase the rate of referrals for sleep studies by at least 80% One hundred fifty one adult patients from a medium size primary care office were recruited Results supported a positive OSA screen for moderate disease in 42% of the participants and for severe disease in 15% of participants An 86% referral rate exceeded the established benchmark by 6% Screening for OSA with SBQ was a reliable tool for disease detection This project aside from diagnosing the illness also offered a chance to educate the adult population about various aspects of the disease and means of testing and contributed to increase in the patient knowledge base Keywords apnea hypopnea obstructive sleep apnea OSA Stop Bang Questionnaire SBQ screening tool Abstract

A Prediction Rule to Screen Patients with Moderate-To-Severe Obstructive Sleep Apnea Emma Grigor, 2018 Introduction

Obstructive sleep apnea (OSA) is a common breathing disorder with numerous health consequences including greater risk of complications perioperatively. Undiagnosed OSA is known to place surgical patients at a higher risk of serious adverse events including stroke and death. Polysomnography (PSG) assessment is the current gold standard test for diagnosing OSA. However, due to the significant time commitment and cost associated with PSG, a substantial number of OSA patients go undiagnosed before the perioperative period. Although the STOP Bang questionnaire screening tool is currently used to help detect OSA patients, the low specificity to screen people without the disease is considered a major limitation. There is a clear need to develop a quick and effective prediction rule with higher overall accuracy to help streamline OSA diagnosis. Tracheal breathing sound analysis in awake patients at the bedside has shown potential to screen OSA patients with higher specificity compared to the STOP Bang questionnaire. To date, no screening tools exist to detect OSA patients that combine the results of breathing sound analysis and STOP Bang. Objectives: The present study aimed to develop a prediction rule using both breathing sound analysis and variables in the STOP Bang questionnaire to better streamline the diagnosis of OSA. Methods: This prospective cohort study recruited patients referred for PSG at the Ottawa Hospital Sleep Centre from November 2016 to May 2017. The study conduct was approved by the Ottawa Health Science Network Research Ethics Board 20160494 01H. After obtaining informed consent, anthropomorphic breathing sound recordings and STOP Bang questionnaire data were collected from over 400 consenting patients. All patients that met the eligibility criteria were included. The breathing sound analysis and STOP Bang results were utilized to design a prediction rule using logistic regression. Sensitivity, specificity, and likelihood ratio were used to compare the diagnostic performance of the final model. Results: Of the 439 consenting study participants, 280 study participants' data were eligible for inclusion in the logistic regression analysis. Physician sleep specialists diagnosed 114 participants (41%) with moderate to severe OSA and 166 participants (59%) with normal to mild OSA. At a predicted probability of moderate to severe OSA greater than or equal to 0.5, breathing sound analysis had a similar sensitivity of 75.9% (95%CI 65.4-82.0) and higher specificity of 74.5% (95%CI 68.5-82.0) when compared to STOP Bang with a sensitivity and specificity of 68.4% (95%CI 58.9-76.6) and 63.2% (95%CI 55.0-70.1) respectively. The sensitivity and specificity for the Safe OSA rule obtained by combining breathing sound analysis and STOP Bang variables were determined to be 75.4% (95%CI 65.4-82.0) and 74.5% (95%CI 68.5-82.0) respectively. A sensitivity analysis using a likelihood ratio test showed that breathing sound analysis contributed significantly to the performance of the Safe OSA rule. The Safe OSA rule was determined to be reasonably discriminative and well calibrated. The five-fold cross validation showed similar results for the final model in the derivation and testing subsamples, which provides support for the internal validity of the Safe OSA rule in our study population. Conclusion: The present study lends further support for the future testing of tracheal breathing sound analysis as a potential method to screen for moderate to severe OSA to help streamline patient care in the perioperative setting. Stop Bang Questionnaire Introduction

Free PDF Books and Manuals for Download: Unlocking Knowledge at Your Fingertips In today's fast-paced digital age, obtaining valuable knowledge has become easier than ever. Thanks to the internet, a vast array of books and manuals are

now available for free download in PDF format. Whether you are a student, professional, or simply an avid reader, this treasure trove of downloadable resources offers a wealth of information, conveniently accessible anytime, anywhere. The advent of online libraries and platforms dedicated to sharing knowledge has revolutionized the way we consume information. No longer confined to physical libraries or bookstores, readers can now access an extensive collection of digital books and manuals with just a few clicks. These resources, available in PDF, Microsoft Word, and PowerPoint formats, cater to a wide range of interests, including literature, technology, science, history, and much more. One notable platform where you can explore and download free Stop Bang Questionnaire PDF books and manuals is the internet's largest free library. Hosted online, this catalog compiles a vast assortment of documents, making it a veritable goldmine of knowledge. With its easy-to-use website interface and customizable PDF generator, this platform offers a user-friendly experience, allowing individuals to effortlessly navigate and access the information they seek. The availability of free PDF books and manuals on this platform demonstrates its commitment to democratizing education and empowering individuals with the tools needed to succeed in their chosen fields. It allows anyone, regardless of their background or financial limitations, to expand their horizons and gain insights from experts in various disciplines. One of the most significant advantages of downloading PDF books and manuals lies in their portability. Unlike physical copies, digital books can be stored and carried on a single device, such as a tablet or smartphone, saving valuable space and weight. This convenience makes it possible for readers to have their entire library at their fingertips, whether they are commuting, traveling, or simply enjoying a lazy afternoon at home. Additionally, digital files are easily searchable, enabling readers to locate specific information within seconds. With a few keystrokes, users can search for keywords, topics, or phrases, making research and finding relevant information a breeze. This efficiency saves time and effort, streamlining the learning process and allowing individuals to focus on extracting the information they need. Furthermore, the availability of free PDF books and manuals fosters a culture of continuous learning. By removing financial barriers, more people can access educational resources and pursue lifelong learning, contributing to personal growth and professional development. This democratization of knowledge promotes intellectual curiosity and empowers individuals to become lifelong learners, promoting progress and innovation in various fields. It is worth noting that while accessing free Stop Bang Questionnaire PDF books and manuals is convenient and cost-effective, it is vital to respect copyright laws and intellectual property rights. Platforms offering free downloads often operate within legal boundaries, ensuring that the materials they provide are either in the public domain or authorized for distribution. By adhering to copyright laws, users can enjoy the benefits of free access to knowledge while supporting the authors and publishers who make these resources available. In conclusion, the availability of Stop Bang Questionnaire free PDF books and manuals for download has revolutionized the way we access and consume knowledge. With just a few clicks, individuals can explore a vast collection of resources across different disciplines, all free of charge. This accessibility empowers individuals to become
